Uropathology Division

BML offers a highly specialized Uropathology Program that delivers exceptional laboratory services focused on Urology practices. Backed by a large team of Board-Certified Pathologists with over 50 years of combined experience, BML is committed to providing unparalleled services to the physicians and the patients we collectively serve. Delivering prompt and definitive diagnosis are the core of our service offering.

The Quality You Expect

BML, is a boutique laboratory that has served the urology community since 1980. Many urologists have come to rely on BML to help provide patients with a fast and accurate diagnosis. BML uses state of the art technologies such as FISH, a vast library of IHC stains, and Molecular Diagnostics for the detection of low grade and high grade dysplasia / adenocarcinoma. Our quality standards include not only the highest level of technologies but also departmental reviews for all challenging cases to ensure the highest level of accuracy and consistency in results at no additional cost. Our level of expertise allows for the diagnosis of difficult cases where other laboratories may report an atypical diagnosis. BML plays a vital role in the healthcare community by offering a wide spectrum of testing to provide the definitive diagnosis that are relied on to stage and treat patients efficiently and in a timely manner.

Early Detection & Management of Prostate Cancer

Our innovative use of novel IHC markers & FISH assays provide highly sensitive and specific information for detecting prostate cancer. BML maintains a large and expanding library of antibodies to assist in providing a definitive diagnosis. The latest development is the PTEN & TMPRSS2-ERG fusion gene which is the most frequent gene present in 40% - 80% of prostate cancers in men. Our compliment of IHC markers and FISH assays are a valuable compliment in predicting and staging cancer recurrence and survival.

Physician Office Services
